

TopConnect. Keeping passengers and crews in touch with their world.

CAPABILITIES AND SERVICES

- **In-seat Messaging**

Seatback messaging between people on or off the aircraft. For onboard chat services, private and public forums are available.

- **Information Services**

In-depth live news with full graphic imagery and interactive destination travel guides with concierge services provide real-time information services to passengers. Targeted custom advertising can be dynamically integrated for airline revenue generation possibilities.

- **Real-Time Transactions**

Thales offers an exclusive international virtual currency and credit card transaction capability which transmits live encrypted credit card data for immediate processing and payment confirmations.

- **Swift Broadband SATCOM**

Fully certified, next generation system in a single 6 MCU package which include two Swift broadband channels yielding up to 864 Kbps dual direction bandwidth, integrated HPA and options for cockpit services.

- **Connectivity Networks and Systems**

Comprehensive onboard connectivity solutions that support passenger WiFi connectivity, voice over IP phone services and embedded IFE connectivity applications.

- **Inflight Connectivity Services**

Thales is aligned with strategic partners to provide a complete connectivity service package including ground ISP and NOC centers for embedded IFE applications.

- **Ground Connectivity Services**

For connection to the aircraft while on the ground, Thales is aligned with strategic partners to provide a complete wireless solution including base station installations and operations in and around airports.

THE THALES ADVANTAGE

What differentiates Thales in the IFE market is the company itself. Thales is a major worldwide electronics company that specializes in aerospace.
